

Week 11 Reconstruction

Daily global surface air temperatures for every year since 1979

Source: Climate Reanalyzer, Climate Change Institute at the University of Maine, based on data from the National Centers for Environmental Prediction Climate Forecast System

Figure 1: Original Graph

This graph tells us what the global daily temperature has been since 1979. It highlights last year and this year's data.

To recreate this visualization, I'm going to need some daily weather data over a long period of time.

Since I cannot find the original data, I'm going to use the twin cities data from here. I'm also going to highlight the current year but I'm going to leave each year with its own color so it might be easier to notice which year was hottest during a certain period.
